Occidental Mall Water Fountain Replacement
117 S Washington St
DONH-COA-02100

Option 3

We wanted to share one additional design option for the board’s consideration regarding the proposed water bottle filling station in Pioneer Square.

For this concept, the base of the fountain would be installed directly on top of the existing concrete surface, with no modifications to the current foundation. The exposed exterior portion of the (concrete) foundation would be color-matched to the surrounding brick to better align with the historic nature of the site.

This option is intended to be a “plug-and-play” installation, minimizing impact to existing foundations while still meeting functional needs. If the board finds this replacement of a new water bottle filling station to be temporary, preserving the foundation will guarantee our ability to return the existing base post FIFA World Cup.

Below are visuals to support this option and a brief description:

Picture 1 – Superimposed image of proposed water bottle filling station on brick

Picture 2 – Current existing conditions/base as of 04/2026

Picture 3 – Proposed water filling station diameter template

Picture 4 – Birdseye/top view (remaining exposed concrete that can be color matched to brick)

Picture 5 – Base of water fountain returned to original state

Proposed Installation on Brick
